

ABSTRACT:

sub 17

A device (1) with playback means (6) for reproducing a recorded signal (AS) recorded on a recording medium (5) starting from a recording medium start position (P1) of the recording medium (5) and starting from a recording start time (T1) by means of at least one playback head (7, 8), and with positioning means (27) for positioning said at least one playback head (7, 8) into a desired recording medium position (GP1, GP2) for the reproduction of a recorded signal (AS) starting from said recording medium position (GP1, GP2), also comprises input means (30) for entering a playback time information (WZI) which characterizes a desired playback moment (GT1, GT2), said desired playback moment (GT1, GT2) corresponding to the sum of a starting time information (BZI) characterizing the recording start moment (T1) and a recording time period (VD1, VD2) which has already elapsed in the recording of the recording signal (AS) in the desired recording medium position (GT1, GT2) of the recording medium (5), while the positioning means (27) are designed for subtracting the starting time information (BZI) from the playback time information (WZI) put in for determining the desired recording medium position (GP1, GP2).
